

Gen-AI training: Week 1 post read and assignments

Post read

Review the post read document at:

<https://github.com/vijay-agrawal/genaitraining/blob/main/training-materials/post%20read%20Gen%20AI.pdf>

(Upto page 41)

It contains references and more details on the topics covered.

Assignments

1. VS Code, colab setup, Python and Basic GenAI Application

Get brushed up on python and create a basic genai app as outlined in the pre-read and setup documentation:

<https://github.com/vijay-agrawal/genaitraining/blob/main/training-materials/0%20Pre-read%20and%20pre-requisites.pdf>

2. Neural networks hands-on (optional)

Build a simple neural network (ANN) by adding layers

Train it with a public dataset, do loss measurement and backpropagation to train it.

Example notebooks in the following zip:

<https://github.com/vijay-agrawal/genaitraining/blob/main/training-materials/3%20Deep%20Learning.pdf>

3. Text to image with Stable Diffusion

Do an image generation in code by using the stable diffusion model

Example notebooks in the following zip:

<https://github.com/vijay-agrawal/genaitraining/blob/main/training-materials/4%20Generative%20Models.pdf>

4. Explore additional code provided

Based on your interest, explore the code zips present below to choose code that interests you:

<https://github.com/vijay-agrawal/genaitraining/tree/main/code>
